# What Your Doctor Doesn't Know About Your Hormones...

and how it's keeping you TIRED and STOPPING you from losing weight.

# IS THE PROBLEM IN YOUR HEAD?

Over the years, we've had tens of thousands of women come to our functional health care clinic for help with their hormones.

Many of them were extremely frustrated with their experience dealing with their primary care physician...

Why?

These women had a lot of hormonal symptoms...

But...

either their blood tests were "normal"...

or...

their tests indicated a problem, they went on meds, brought their levels back to normal and yet they still were experiencing the same symptoms.

How can that be?

As a result, many of these women were told that the problem was "in their head".

Is the problem in their head?

Of course not!

These women were victims of the WRONG approach and the WRONG advice.

So...

What is going on here? What is the CAUSE of their hormonal problems?

These women have a DEEPER issue going on...

These women are in **THE METABOLIC STORM.**

# WHAT IS THE METABOLIC STORM?

After analyzing tens of thousands of women with hormonal issues we have discovered that their problem is not simply due to a single hormone that is “out of whack”.

It’s much more complicated than that.

This is why many of the women who went on meds didn’t feel any better even though they constantly adjusted the levels.

Let me ask you this?

How many times does a physician have to adjust medication levels before they realize that there is something else going on?

What we have found...

metabolically speaking, these women were in a “mess” and there was no better descriptive word to use than a storm...

A Metabolic Storm.

What is going on inside a woman that causes them to go into a Metabolic Storm?

First...

Let’s look at the symptoms of the Metabolic Storm.

Hormonal symptoms differ from woman to woman.  
Since the human body is completely run by hormones, hormonal symptoms can show up anywhere.

Some woman will say their hormones are messed up because their metabolism is slow.

Others will say that their hormones are messed up because they can't sleep.

What many women don't realize...

A majority of their other symptoms they are getting are ALSO due to hormones.

BUT...

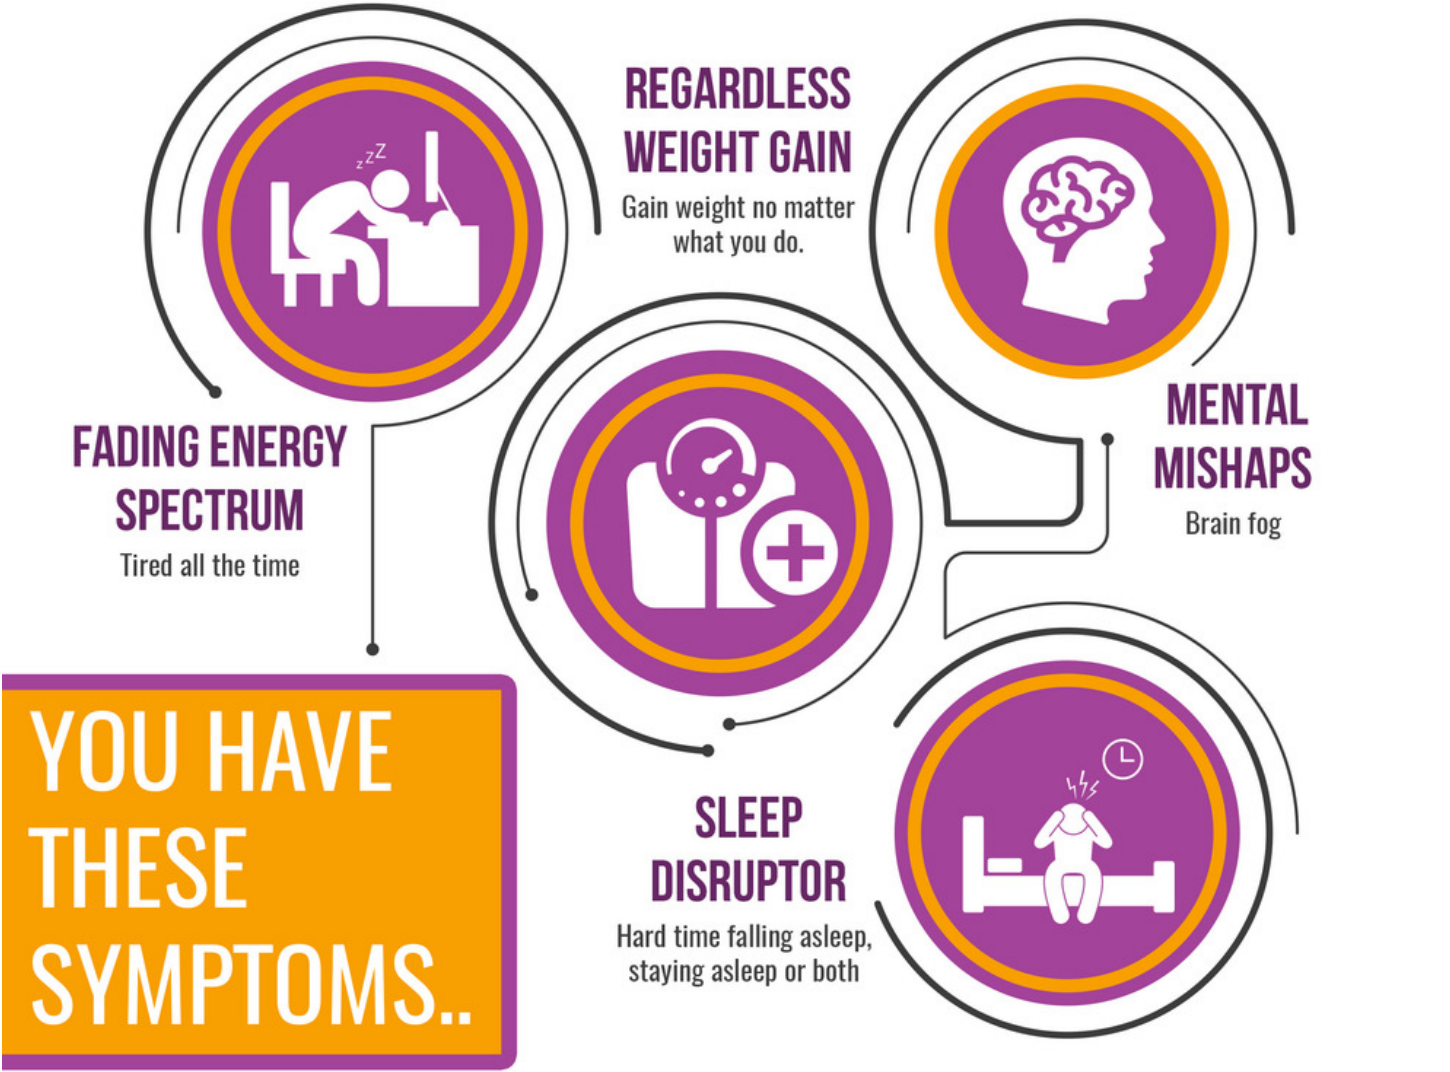

# WE HAVE FOUND THAT WOMEN IN THE METABOLIC STORM SHARE FOUR COMMON SYMPTOMS...

Here are the FOUR main symptoms associated with The Metabolic Storm.

1. **Regardless Weight Gain.** We call it regardless weight gain because a women in the Metabolic Storm CAN'T lose weight no matter what they do. In fact, they tend to be gaining weight...fast.
2. **Fading Energy Spectrum.** Women in the Metabolic Storm are tired. They don't have the energy that they used to. Fatigue is a BIG problem.
3. **Mental Mishaps.** Women in The Metabolic Storm usually complain of some kind of brain fog. Many women don't know how to describe what's going on with their brains, but something isn't right. They are more forgetful, or they don't seem as sharp.
4. **Sleep Disruptor.** Women in the Metabolic Storm have a hard time falling asleep, or they have a hard time staying asleep, or both.

# Are You In The METABOLIC STORM?

# WHY ARE YOU IN THE METABOLIC STORM?

One of the questions we get asked a lot by women who are in The Metabolic Storm is...

“How did all of this start?

What we have discovered after analyzing tens of thousands...

Most of their problems began around one of the Three Hormonal Shock Events...

What are the Three Hormonal Shock Events?

1. Menstruation
2. Pregnancy
3. Menopause

For example...

Many women will say...

“After my second child, my thyroid started giving me problems”

Or...

“I’ve had hormonal problems ever since my first period”

Or...

“My hormones were fine until around menopause”.

If you think back to when you started having problems with your hormones, there is a good chance that they began around one of the hormonal shock events.

We call them hormonal shock events, because...

Like the name implies, those events are shocks to your body, especially your endocrine system.

Now...

The three hormonal shock events are not the only reason why you may be in the Metabolic Storm.

There are a few other big causes...

Such as...

Endocrine disruptors and Stress.

Endocrine disruptors are chemicals that affect your hormonal system. Many of these chemicals actually look very similar to estrogen (called xenoestrogens) and can cause significant problems.

Xenoestrogens are everywhere...

Skin care lotions, makeup, fragrances, water, foods, plastics...

they are essentially impossible to avoid.

Another big cause of the Metabolic Storm is STRESS.

Chronically elevated levels of stress will DAMAGE your hormonal system.

# CAUSES OF

## *The Metabolic Storm*

**A WOMAN HAS THREE HORMONAL SHOCK EVENTS**

**Menstruation**

**IN THEIR LIVES...**

**Menopause**

**Pregnancy**

Many Hormonal problems can be traced back to one of these hormonal shock

**OTHER CAUSES**

**ENDOCRINE  
DISRUPTORS**

category of chemicals that alter the normal function of hormones. A big one is Xenoestrogens...chemicals that mimic estrogen. These are found in skin care items, chemicals, drinking water, fragrances etc...

our body interprets physical, mental and environmental factors as stress. Chemicals, processed foods, lack of sleep, too little exercise, too much exercise can be interpreted as stress. Chronically elevated stress levels kills your hormonal balance.

**STRESS**

# WHAT IS THE CAUSE OF THE METABOLIC STORM?

As I mentioned earlier, the problem is much more complicated than a single hormone “out of whack”.

The problem is actually due to something we call the “unholy trinity” of hormone producing organs.

What are the three hormone producing organs that are at fault?

The Adrenals, Thyroid and Ovaries.

A woman in the Metabolic Storm doesn't just have a thyroid problem...

Or...

She doesn't just have an adrenal problem...

Or...

She doesn't just have an Ovary problem.

All three are involved.

Why do the thyroid, adrenals and ovaries all get involved?

Well...

Our hormonal system doesn't work in a vacuum-like system.

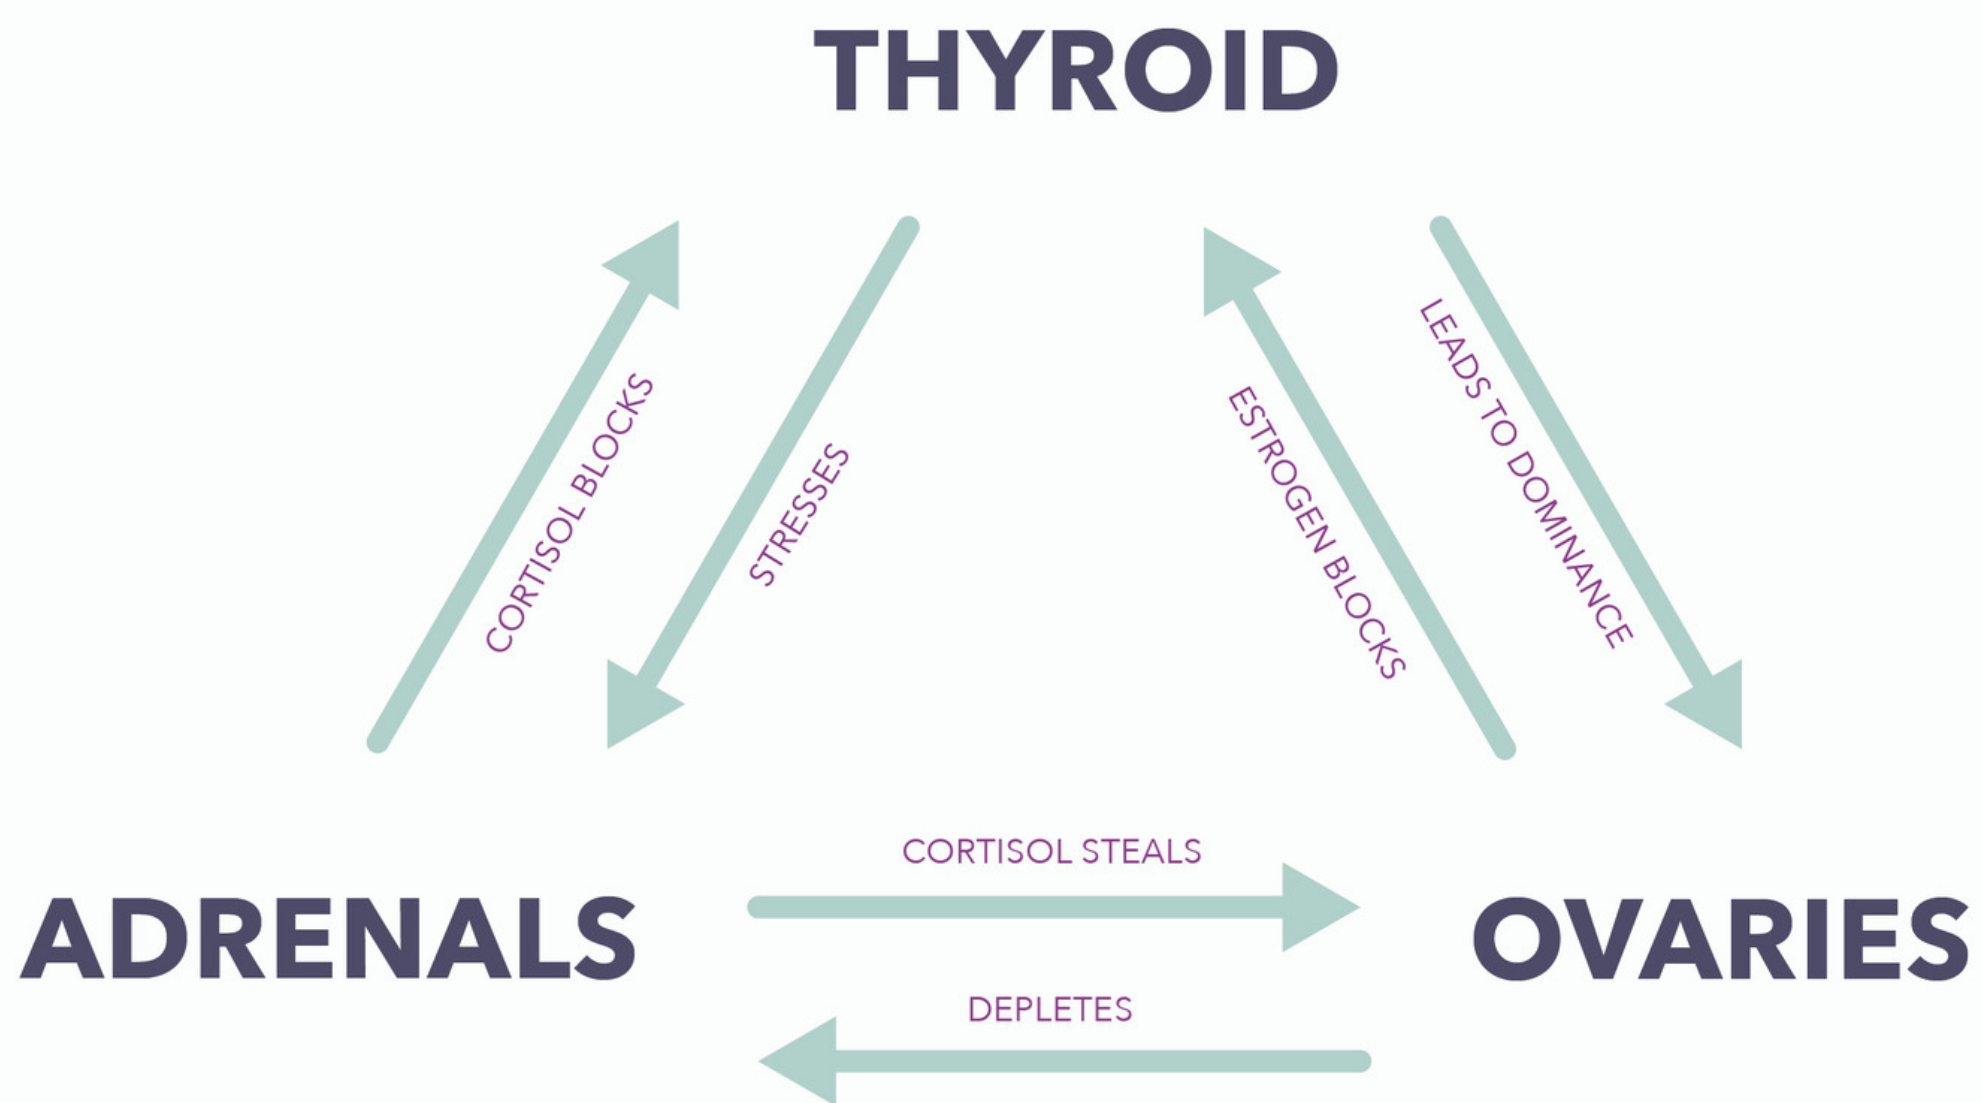

# WHAT DO WE MEAN BY THAT?

The hormones don't act independently of others.

What may start off as a thyroid issue can quickly involve the adrenals and ovaries.

What may have started off as an adrenal problem can quickly affect the thyroid and ovaries.

The same goes with the ovaries.

The bottom line...

The thyroid rarely acts alone.

The adrenals rarely act alone.

The ovaries rarely act alone.

If one of them stops working optimally, the others are affected.

This means that a women in the Metabolic Storm will have symptoms from ALL THREE hormone producing glands.

This is a BIG reason why it can be extremely frustrating to get help or answers they need.

# THE MAIN HORMONE BEHIND THE CURTAIN.

Even though there are three hormone producing glands that are the source of the symptoms a woman in the Metabolic Storm experiences...

There is still something deeper going on.

Just like in the Wizard of Oz...

There is someone behind the curtain, pulling all the strings...  
and in this case, it's another hormone.

By this point, you should be understanding how complicated the problem really is...

which is why the standard approach isn't working or hasn't worked for you.

What hormone is pulling all the strings?

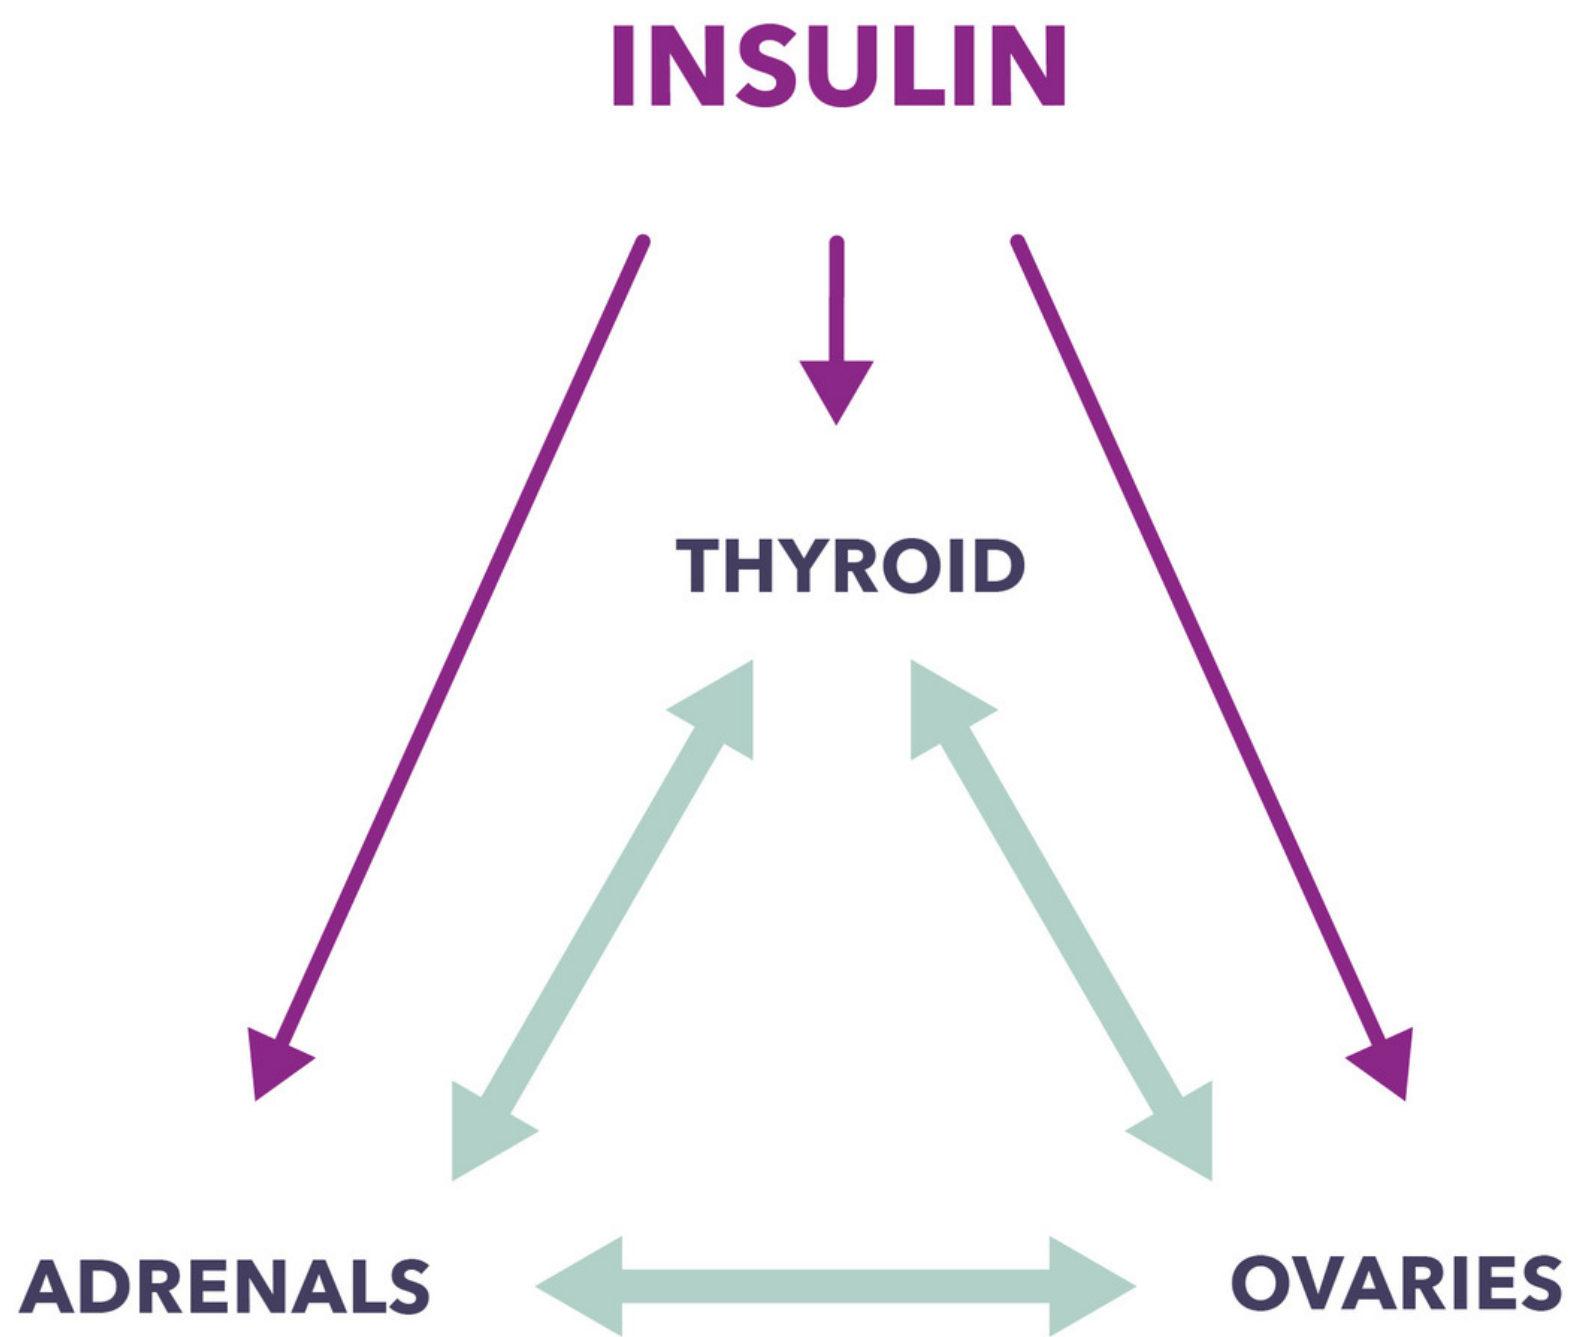

INSULIN.

Not only do the thyroid, adrenals and ovaries all affect each other directly...

Insulin can have an effect on each of them as well.

If you are in the Metabolic Storm...

Then you also have an insulin problem.

This means that a BIG part of fixing your hormones also involves **FIXING** insulin.

Here's The Problem.

One thing that we have discovered over the years is that when insulin becomes a problem it can be difficult to fix because...

there are **THREE ROADBLOCKS** that are affecting insulin and need to be removed...

we call them the **THREE INSULIN ROADBLOCKS**.

# WHAT DOES ALL THIS MEAN FOR YOU?

In order to FIX your hormones...

You have to FIX the Metabolic Storm that is going on inside of you.

You are in the Metabolic Storm because there are three hormone producing organs that are affected.

AND...

the BIG cause behind the three hormone producing organs is a problem with insulin...

Insulin can't be fixed unless you REMOVE the three insulin roadblocks that are in the way.

There is still one more very important part to all of this...

It's something that we call "Knowing Your Metastorm Type."

# WHAT IS YOUR METASTORM TYPE?

Even though all three hormone producing organs (thyroid, adrenals and ovaries) are involved in the Metabolic Storm...

One of them is central.

What do I mean by that?

Some women in the Metabolic Storm have more thyroid involvement than ovaries or adrenals. It doesn't mean that they don't have ovary or adrenal issues...

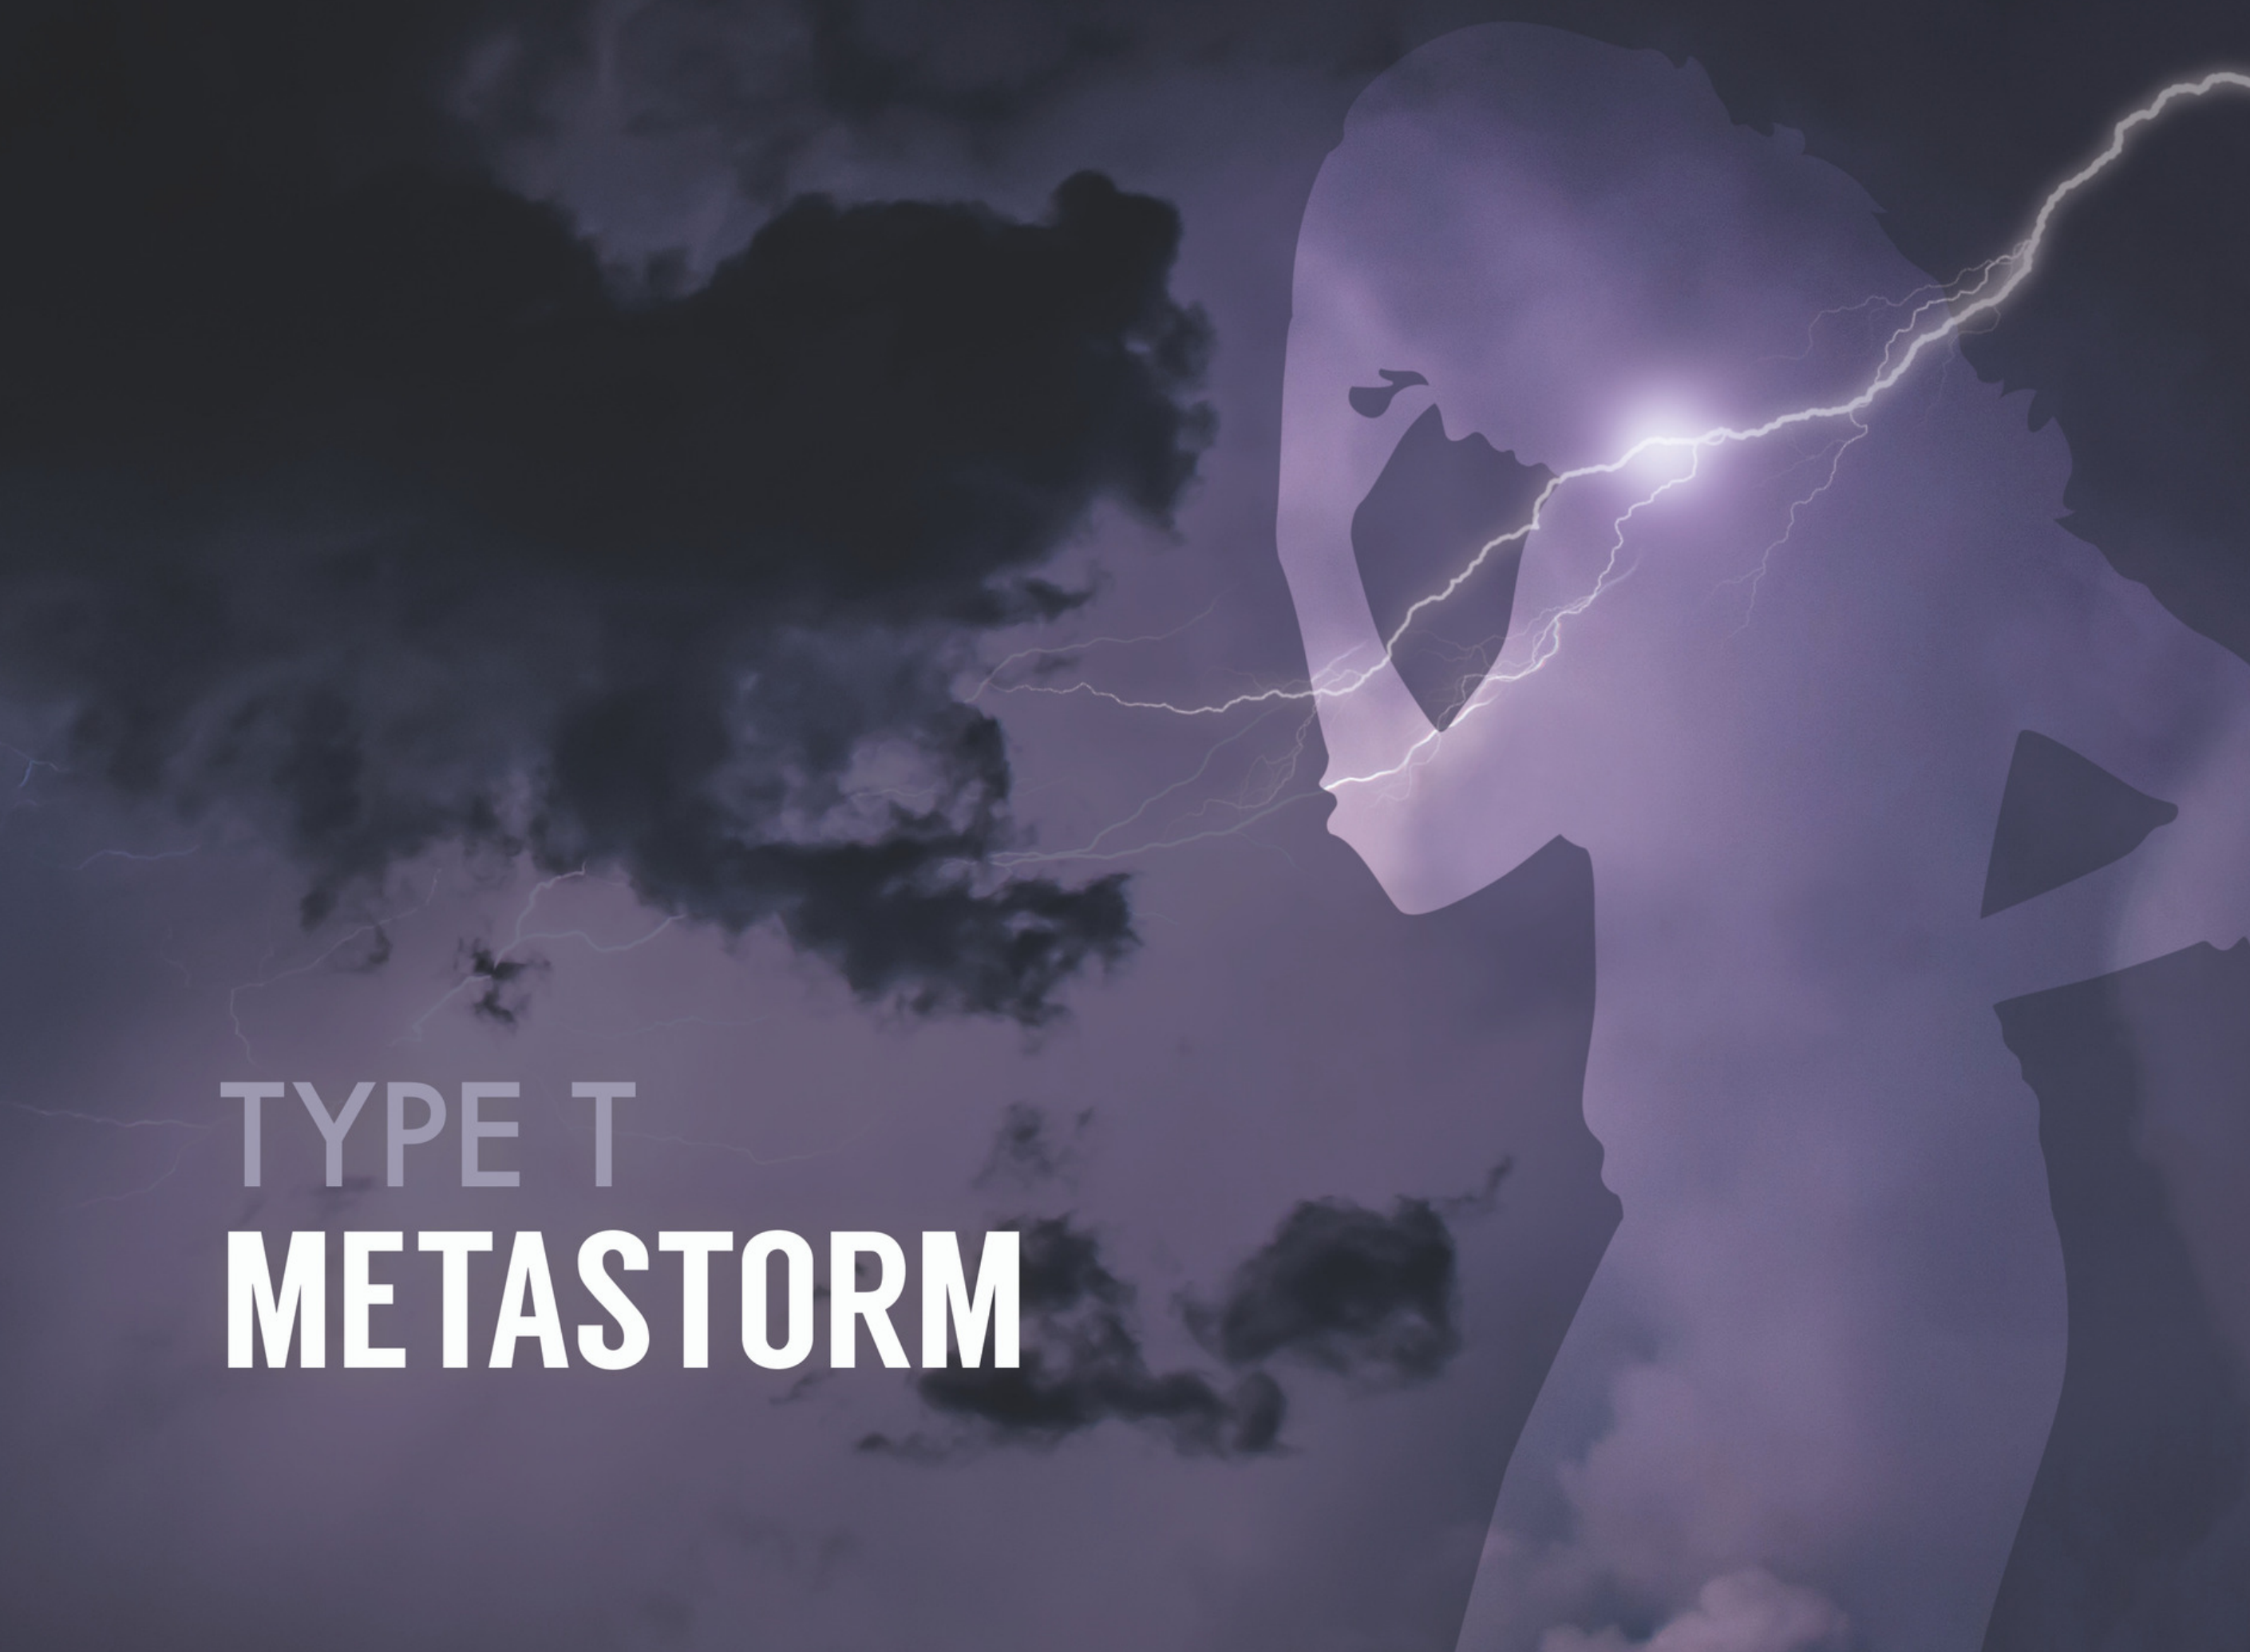

it just means that their thyroid is slightly more involved.

Some women in the Metabolic Storm have more adrenal involvement.

Some women in the Metabolic Storm have more ovary involvement.

As a result...

# TYPE T METASTORM

We use the terms...

- ...MetaStorm Type-T (thyroid)
- ...MetaStorm Type-O (ovaries)
- ...MetaStorm Type-A (adrenals)

For example...

A women who is MetaStorm Type-T would have all the symptoms of the Metabolic Storm, but their thyroid seems to be more affected.

# WHY IS IT IMPORTANT TO KNOW YOUR METASTORM TYPE?

By knowing your MetaStorm type, it can make fixing the problem that much easier.

When you are in the Metabolic Storm, you still have to remove the three insulin roadblocks...

and for many women, fixing insulin is all they need to do.

But...

When you know your MetaStorm type, you are able to take the EXACT nutrients your body needs.

For example...

If you are a MetaStorm Type-T, you can start with the right thyroid nutrients to help you get better...faster.

Where do you go from here?

There is way more that I can get into with this guide, but as you can see, there is already a lot of information to digest.

The good news is...

The Metabolic Storm can be fixed.

Now that you have a better understanding of what is going on with your hormones, I'd like to show you the exact process we use in our clinic to Fix the problem and solve your specific issues.
